Global Covid-19: Impact Report: Key Insights

- 1. Case Prevalence in the Americas:** The Americas have seen a notably high number of Covid-19 cases, with 0.79% of the population affected.
- 2. Qatar's Case Rate:** Qatar has the highest number of cases per million population among all countries.
- 3. Global Mortality Rates:** The overall global mortality rate is 3.97%, while Europe experiences a significantly higher rate of 6.40%.
- 4. Recovery Rates by Region:** The global recovery rate stands at 57.45%. The Americas report a lower recovery rate of 50.55%, in contrast to the Eastern Mediterranean region, which shows a significantly higher recovery rate of 80.59%.
- 5. Positive Trends in Recovery:** By June 16, 2020, the number of recovered Covid-19 cases surpassed the number of active cases, indicating effective healthcare responses during that period.
- 6. Trends in Recoveries and Active Cases:** On May 22, June 8, July 2 (the highest peak), and July 4, newly recovered cases exceeded new active cases. However, on July 19, there was a notable decline in newly recovered cases, resulting in the largest disparity between recoveries and active cases, reflecting a shift in pandemic dynamics.
- 7. Total Case Distribution:** The Americas report the highest total case counts globally, while the Western Pacific records the lowest.
- 8. Testing Volume:** Europe exhibits the highest number of Covid-19 tests conducted, whereas Africa has the lowest testing figures.
